

Laboratory #9: Presentation & Report

Final Report

The final report should have the following sections:

1. **Introduction:** Describe the office and its location. Introduce some of the weather data and the maximum heating load. Describe and show the calculations you used to determine the heat load using your estimates.
2. **Hot water system:** Document the design of your hot water heating system including its requirements and its cost. Also present in that section your economic analysis of the hot water system.
3. **Solar System:** Document your analysis of the solar system including its requirements. Also present in that section your economic analysis of the system.
4. **Discussion/conclusion:** This is the part of the report where you will present your recommendations on the system to install. You have to build strong arguments to defend your recommendations, so think about including discussion about why other alternative options could also be acceptable for reasons outside the scope of your analysis.

There are no formal requirements for the contents of the report, but it should include all the main elements of the analysis made in labs #3 through #8. Some of the spreadsheet tables and reference material should probably be included only in appendices. The technical merit of the design and analysis will be evaluated in addition to the presentation, organization, and completeness. The report should be written for someone with a technical background on the subject (your instructor/office manager). The report is due on Friday, June 5.

Presentation

Presentations are scheduled for Tuesday and Thursday of week 10 (June 2 and 4). The presentation time for each team will be posted on Canvas. The presentation should be 10 to 12 minutes in duration (minimum 9 min). Remember that this is your chance to convince me you got the right solution. The presentation will be evaluated based on the following criteria:

- Non-verbal skills (poise)
 - Comfort
 - Confidence
 - Connection
- Verbal skills
 - Clarity
 - Volume
- Content
 - Information
 - Organization
 - Visual/Graphic
