The logo for Kennedy Club Fitness is an oval emblem. It features a stylized, cursive 'K' in purple and blue. To the right of the 'K', the word 'ennedy' is written in a matching cursive script. Below this, the words 'CLUB FITNESS' are printed in a bold, sans-serif font. At the very bottom of the oval, 'EST. 1981' is written in a small, sans-serif font. The entire logo is outlined with a thin purple border.

\$5/month subscription

Problem:
Manual workout tracking

Key propositions / Problem statement

How will you make your customers' life happier?

- Automatically tracks: Weight, reps, and sets
- Eliminates need for manual workout logging
- Helps users stay consistent and improve progress
- Simple, easy-to-use system integrated into existing machines
- Provides gyms with valuable usage and engagement data

Channels

How are you going to reach your customers?

- Direct outreach to gyms (emails + in-person visits)
- Pilot programs with local gyms
- University gym partnerships
- Feedback from gym communities
- Fitness expos / networking

Customer segments

Who are your customers? Describe your target audience in a couple of words.

Primary Customers (Payers):

- Boutique gyms (early adopters)
- Local and university gyms
- Mid-size commercial gyms

End Users: Gym members (especially

- beginners/intermediate lifters)
- Gym-goers who don't track workouts consistently
- Personal trainers

Revenue Streams

How much are you planning to earn in a certain period? Compare your costs and revenues.

- Sale of smart pins (hardware per machine)
- Subscription for app + workout tracking features
- Maintenance/service fees

GYM GOER NEEDS

	Customer Discovery Worksheet	
	What are your core assumptions?	
A1	New gym-goers struggle with tracking their workouts and progress effectively.	
A2	There is a strong demand for features that provide visual representations of fitness progress.	
A3	Users prefer seamless integration of hardware (Smart Pin) with the app for automatic data tracking.	
A4	Many users will be willing to pay for a subscription to access enhanced tracking features and analytics.	
A5	Community support and motivation through the app will significantly enhance user engagement and retention.	
	What questions do you need to ask to test your assumptions?	What will you learn from each question?
Q1	How do you currently track your workouts?	Understand existing methods and pain points in tracking workouts.
Q2	What motivates you to continue your fitness journey?	Gauge the importance of progress tracking and how features might influence motivation.
Q3	How helpful would visual progress be in your fitness routine?	Assess demand for visual tracking features and their potential impact on engagement.
Q4	Would you prefer manual tracking or automatic tracking with a device?	Determine user preference for tracking methods and the appeal of integration.
Q5	What features would you find most valuable in a fitness app?	Identify key features that resonate with users and reflect their needs and desires.
Q6	How much would you pay for a fitness tracking app?	Gauge price sensitivity and willingness to invest in subscriptions.
Q7	How often do you seek support for your fitness journey?	Understand the importance of community engagement in user retention.
Q8	What concerns do you have about privacy or data usage?	Uncover potential barriers related to user trust and data security.
Q9	Have you used other fitness tracking apps before?	Gain insights into competitor strengths and weaknesses.
Q10	What challenges do you face when going to the gym?	Identify broader issues impacting the user experience beyond tracking.
	Who do you need to talk to?	How are you going to get to them?
P1	New Gym-Goers	Engage with local gyms or fitness classes to find new members and offer them a chance to provide feedback.
P2	Personal Trainers	Reach out to trainers who work with beginner clients for insights into common challenges and needs.
P3	Fitness Enthusiast Communities	Join local fitness groups on social media platforms (e.g., Facebook, Reddit) and initiate discussions or surveys.
P4	Health and Fitness Influencers	Connect with influencers and do interviews.
P5	Commercial Gym Owners/Managers	Network with gym owners to understand their members' needs and how your solution can fit within their facilities.
P6	Fitness App Users	Survey users on platforms like Instagram or TikTok to gather feedback on existing apps they love or dislike.
P7	Healthcare Professionals	Speak to nutritionists or physical therapists to understand barriers they see in fitness adherence among their clients.
P8	Local Fitness Events	Attend or sponsor community fitness events to interact with potential users and gather feedback firsthand.
P9	Online Forums	Post queries in fitness and health forums or platforms like Quora to reach a broader audience for insights.
P10	User Reviews and Feedback	Analyze existing fitness app reviews on platforms like Yelp or app stores to identify common user sentiments.

15 INTERVIEWS

Customer Interviewing Insights and Takeaways			
Problems Lack of data on machine usage and bottlenecks Equipment gets worn down quickly in high-traffic gyms Staff cannot manage complex systems		Emotions Practical / cost-conscious market Skeptical of new tech Concerned about reliability	
Existing Solutions Manual observation of usage patterns Simple, non-tech machines		Deficiencies No insight into member behavior or retention No real data tracking	
Channels Email communication Internal gym operations			

Customer Interviewing Insights and Takeaways	
Problems • Does not always remember previous weight or reps • Gets discouraged when progress feels slow • Finds it difficult to track when switching machines	Emotions • Proud when he hits a personal record • Annoyed when he loses track of progress • Competitive with himself and friends
Existing Solutions • Uses Strava for running • Uses the Notes app for lifts • Occasionally asks friends what workouts they are doing	Deficiencies • Strava is better for cardio than lifting • Notes do not show trends or progress • No reminders for what he did last workout
Channels • Uses Strava, Instagram, and YouTube • Would prefer a mobile app • Would scan a QR code on gym equipment if it helped track exercises •	

Customer Interviewing Insights and Takeaways			
Problems • Forgets to write down weights and reps during workouts • Has trouble remembering what she lifted last week • Gets annoyed when the gym is crowded and she has to change her workout plan		Emotions • Motivated when she sees progress • Frustrated when she feels stuck • Overwhelmed by workout tracking apps with too many features	
Existing Solutions • Uses Apple Notes sometimes • Takes occasional photos of machines or weights • Has tried a fitness app but stopped using it		Deficiencies • Notes are messy and inconsistent • Apps take too long to update between sets • No easy way to compare past workouts at the university gym	
Channels • Finds workout ideas on TikTok and Instagram • Talks with friends at the gym • Would notice gym features through posters, QR codes, or the university gym app			

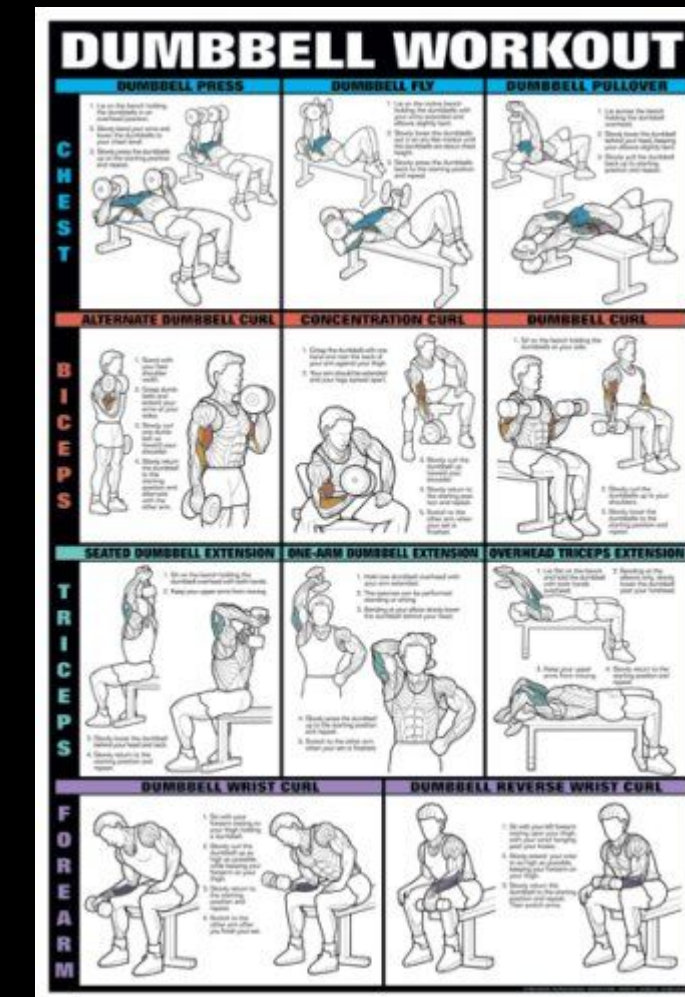

CUSTOMER DEVELOPMENT LEARNINGS

WHAT WE LEARNED :

- ~85% OF PEOPLE WOULD LIKE TO TRACK THERE WORKOUTS ONLY IF IT WAS EASY AND REQUIRED LITTLE TO NO WORK
- AUTOMATION AND USER INTERFACE HEAVILY MATTERS
- MOST PEOPLE WOULD NOT INVEST IN IT PERSONALY BUT WOULD LIKE GYMS TO HAVE IT
- PEOPLE WOULD ENJOY TRACKING ON FREE WEIGHTS

WHAT WE CHANGED:

- BEGAN TARGETING GYM OWNERS AS THE PRIMARY COSTUMER
- FOCUSED ON EASY USER INTERFACE
- LEARN TO TARGET OTHER WORKOUT METHODS

COSTUMER ANALYSIS

1 Customer Pains, Gains, & Jobs to Be Done

Customer Pains:

- Inconsistency: Users struggle to remember previous workouts, resulting in inconsistent training records.
- Lack of Detail: Existing solutions often fail to capture essential strength training details (weights, reps, sets, machine usage).

-Customer Gains:

- Enhanced Clarity: A simplified tracking solution would lead to more organized records and better awareness of progress.

Jobs to Be Done:

- Users need a reliable and effortless way to log workouts and monitor progress over time.

2 Emotions

- Frustration: Users feel frustrated with the effort and inconsistency required to track their workouts.
- Disappointment: A lack of visible progress leads to feelings of defeat, especially when efforts are not recognized.
- Confusion: Users often experience confusion about their routine due to scattered tracking methods.

3 Current Solutions

- Memory Recall: Users rely on remembering past workouts but struggle with accuracy and consistency.
- Manual Documentation: Some users use Apple Notes or screenshots to record workouts, but these methods are not structured for fitness tracking.

4 Deficiencies

- Lack of Integration: Current solutions often do not integrate well with strength-training activities or equipment.
- Limited Tracking Capability: Existing tools frequently lack the ability to log detailed workout data (weights, sets, and machine usage).
- Insufficient User Engagement: Many tools do not provide features that enhance user motivation or visualize progress effectively.

5 Channels

- Fitness Apps: Promote TrackWeight through existing fitness platforms where users regularly seek solutions for tracking and motivation.
- Social Media: Utilize platforms like Instagram and Facebook to reach fitness communities and promote the app's unique features.
- Local Gyms and Fitness Classes: Engage directly with gym-goers by collaborating with local gyms to provide demos or workshops on effective tracking.

LEARNING CARDS

Learning Card

Strategyzer

Insight Name

Gym owner adoption test

Date of Learning

Persona

Team effort

STEP 1: HYPOTHESIS

We believed that

We believed that gym owners would be interested in smart workout tracking technology if it improves member engagement, supports member retention, and provides useful workout data without creating extra work for staff.

STEP 2: OBSERVATION

We observed

We observed that gym owners and gym decision makers care less about the technology itself and more about whether it creates clear value for the gym. Their main concerns include cost, setup, maintenance, equipment compatibility, safety, and whether members would actually use it. They are more likely to consider Track Weight if it helps members stay motivated and gives the gym useful engagement data.

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

From that we learned that Track Weight needs to solve problems for both gym users and gym owners. For users, it must make tracking easier. For gyms, it must show value through engagement, retention, better member experience, or personal training support. A product that only helps users but does not make business sense for gyms may be harder to sell.

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

Therefore, we will continue testing with gym owners and managers to understand pricing, installation concerns, and adoption barriers. We should focus early testing on university gyms, local gyms, and boutique gyms that may be more open to trying new fitness technology.

Learning Card

Strategyzer

Insight Name

workout tracking

Date of Learning

Persona

Team effort

STEP 1: HYPOTHESIS

We believed that

gym users do not consistently track their workouts because manually recording weights, reps, sets, rest times, and progress takes too much time and effort during their workout.

STEP 2: OBSERVATION

We observed

that many gym users care about tracking progress, but their current tracking methods are inconsistent. Some rely on memory, Apple Notes, screenshots, Strava, smartwatch apps, or fitness apps. Several users forget previous weights, reps, sets, or rest times, and some feel discouraged when they cannot clearly see improvement.

STEP 3: LEARNINGS AND INSIGHTS

From that we learned that

the real problem is not just that users need another fitness app. The stronger problem is that gym users want an easier way to see progress without adding extra work during their workout. Tracking needs to be fast, simple, and connected to motivation.

STEP 4: DECISIONS AND ACTIONS

Therefore, we will

focus Track Weight on reducing manual tracking friction. We will prioritize simple workout history, progress visibility, personal records, and low-effort tracking that helps users stay consistent without interrupting their routine.

EXPERIMENT #4 HARDWARE PROTOTYPE

TRACKWEIGHT WORKFLOW

FROM PIN TO USER ACCOUNT

1. USER CHECKS IN WITH NFC

User taps their phone on the NFC chip to identify themselves.

2. PIN RECEIVES INPUT FROM BUTTON

User selects the desired height using the machine selection button.

3. CORRELATE HEIGHT TO WEIGHT

Pin correlates the selected height to the corresponding weight on the machine.

4. DETECT REPS (VIA MOTION)

Pin waits for motion. Detects acceleration and deceleration to count each rep.

5. SEND DATA OVER WIFI

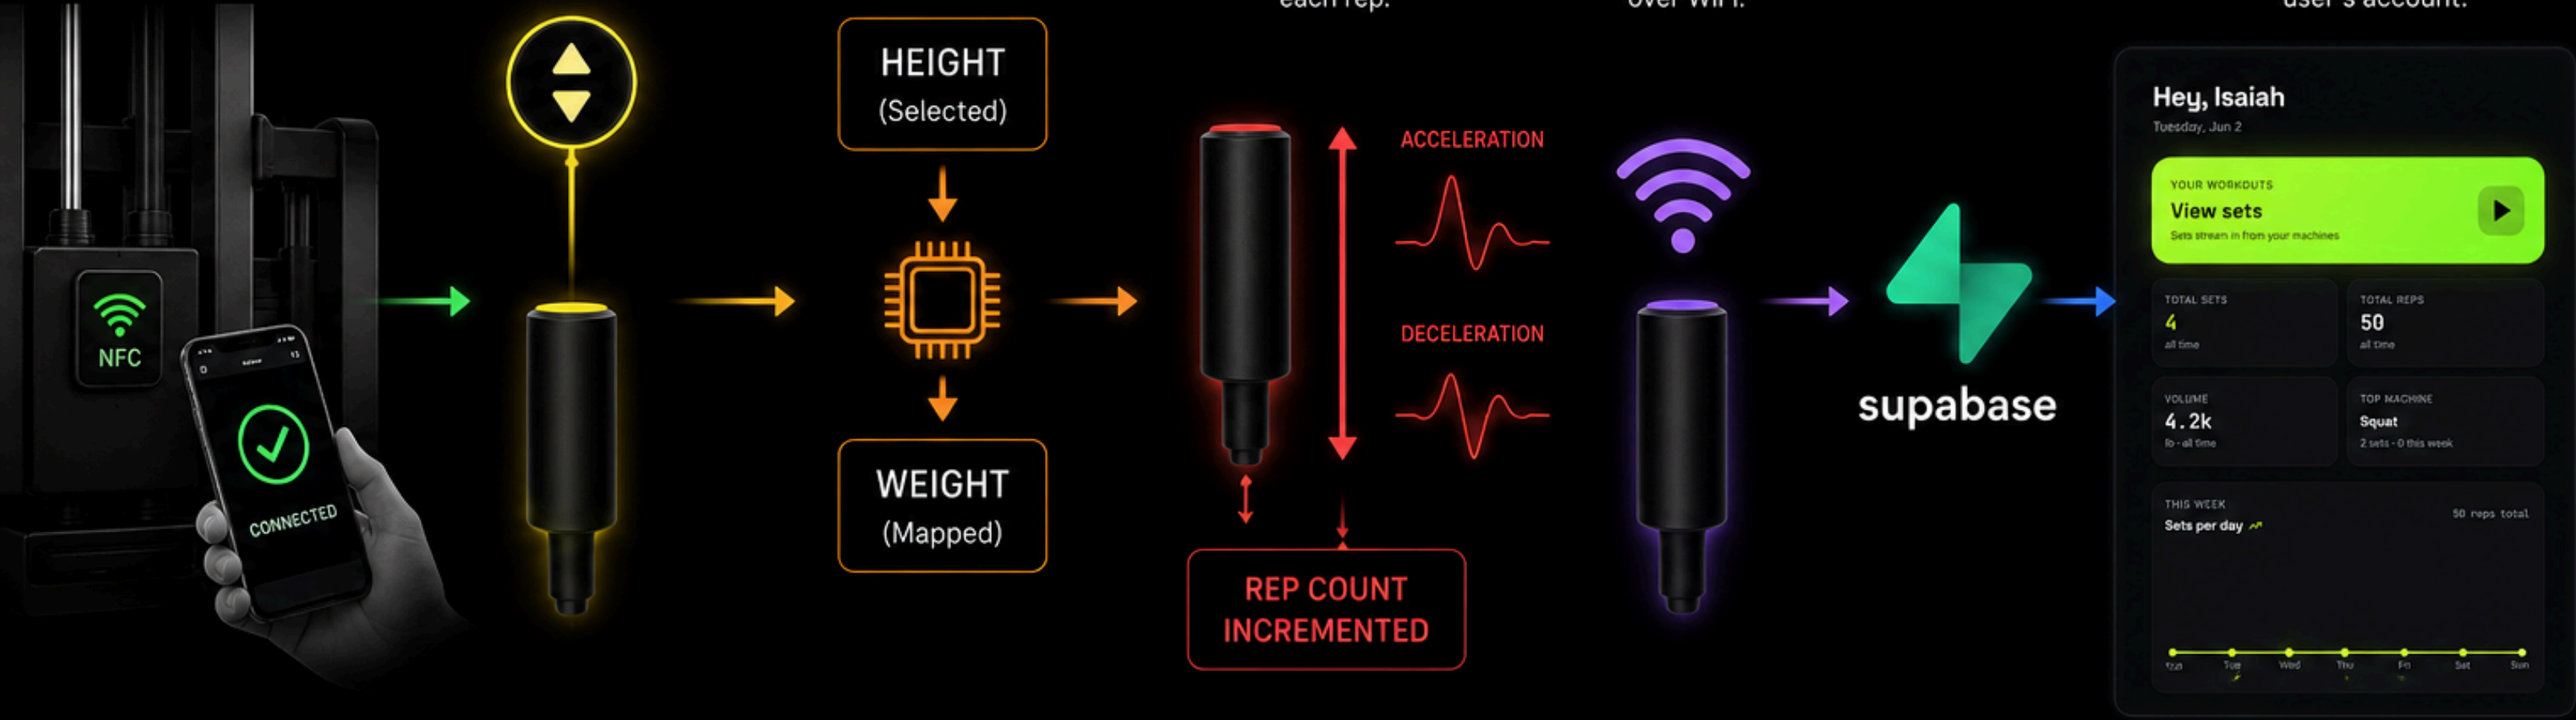

Pin sends workout data (user ID, machine ID, weight, reps, timestamps) over WiFi.

6. DATA STORED IN SUPABASE

Data is securely stored in Supabase cloud database.

7. FETCH & ORGANIZE IN APP

Our app fetches the data from Supabase and organizes it into the user's account.

IDENTIFY USER

User taps NFC chip on the pin to securely identify themselves.

SELECT HEIGHT

Button input sets the pin height on the weight stack.

MAP TO WEIGHT

Pin maps the selected height to the exact weight value.

DETECT & COUNT REPS

Acceleration (up) and deceleration (down) are detected to count reps accurately.

SEND VIA WIFI

Workout data is sent wirelessly in real-time to the cloud.

STORE IN SUPABASE

Data is stored securely in Supabase for reliability and scale.

ORGANIZE IN ACCOUNT

Our app fetches and organizes the data into the user's personal account.

MVP Experiment Canvas

Project name:

Made by:

Track Weight

Team

4. Customer Engagement ❤️

How are you going to engage the customers who used your MVP, to learn from their experience and gather feedback to improve your Value Proposition?

We will create a simple MVP landing page that explains the problem and solution. The page will include a short description of what track weight will do, visual examples, and survey resonoces. also a button to join a waitlist giving us an example of the customer market

1. Your Customer Segment 👤

Which segment of your target customers will experience the most value from your MVP, and can you learn from them?

Beginner to intermeditate gym users who lift weights and want to track their progress but struggle with consistently recordeing weihgts, reps, sets, or machine usage during workouts.

2. Value Proposition 📋

My company, __ (insert of company) __, is developing __ (a defined offering) __ to help __ (a defined audience) __ __ (solve a problem) __ with __ (secret sauce/differentiation) __.

Track weight helps gym users automatically track their progress, so they can rememeber past workouts, and see improvement over time. help with consistancy

3. Channel(s) 📺

How are you going to reach your Customer Segment and "deliver" your Value Proposition to them?

University Gym, instagram, TikTok, QR codes near the gym equipment. University advertising and friend groups

5. Riskiest Assumption(s) 🎯

What you are setting out to test with your MVP?

Are these assumptions about the Problem, Solution or Implementation?

- Gym users care enough about there workout and progress that they want to track it.
- users are frustated by manuel tracking and pre-exisiting methods
- users would prefer a low effort system to track there workouts
- progress visibility increases motivation and consistancy

6. Experiment Format 🧪

WHAT type of experiment are you going to run?

Landing page MVP with an interest form or short survey. The page will test whether gym users understand the problem, value the proposed solution, and are willing to sign up, give feedback, or request early access.

7. Scenario / Workflow 📋

HOW does that work? Describe the steps from beginning to end.

A gym user sees a QR code, Instagram story, or shared link. They open the Track Weight landing page. They read the problem centered message about forgetting weights, reps, and progress. They view a short explanation of how Track Weight would help. Then they choose a call to action, such as joining the waitlist, answering a quick survey, or selecting the feature they care about most. They also have the capability to explore our intial app prototype and give feedback.

8. Metrics 📊

What will you measure? (Can be multiple metrics)

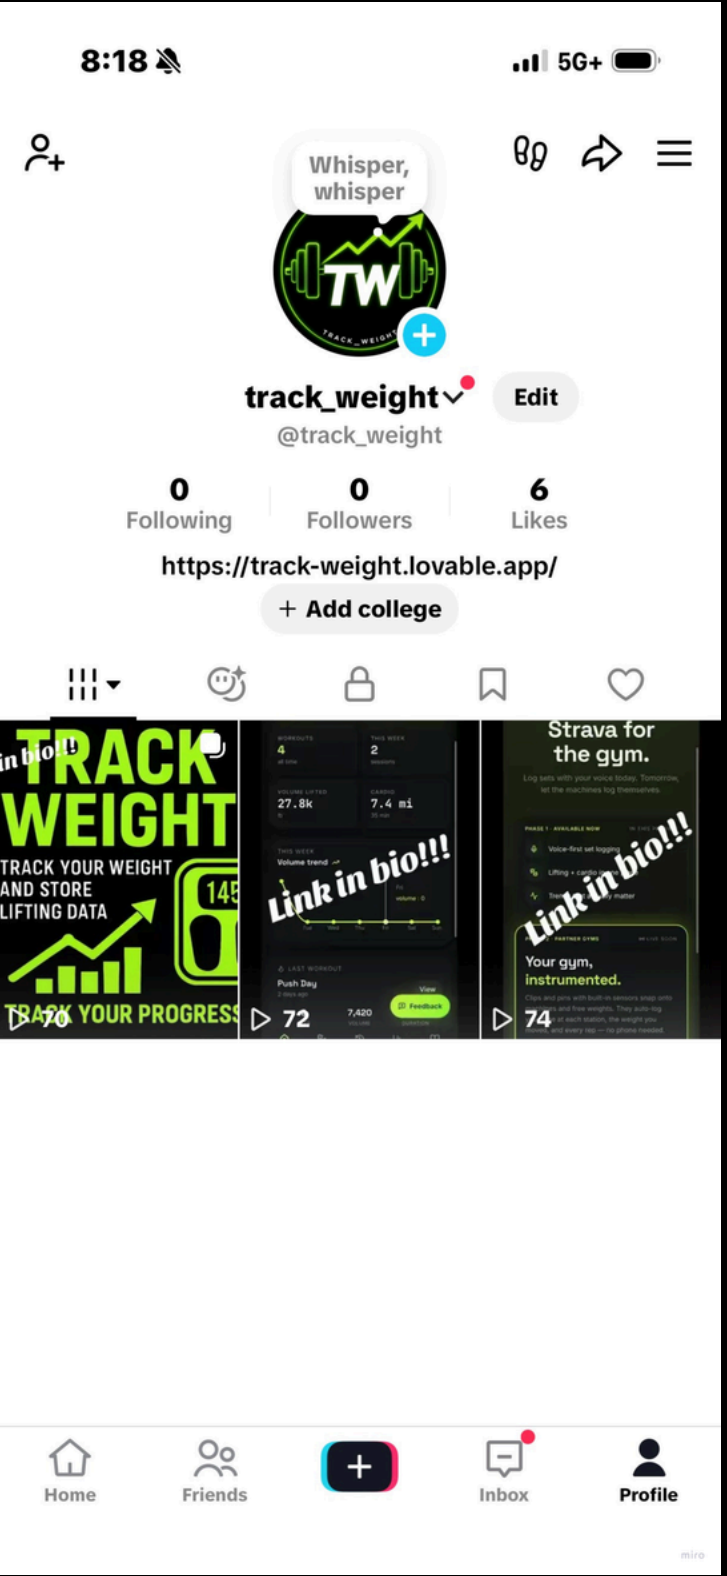

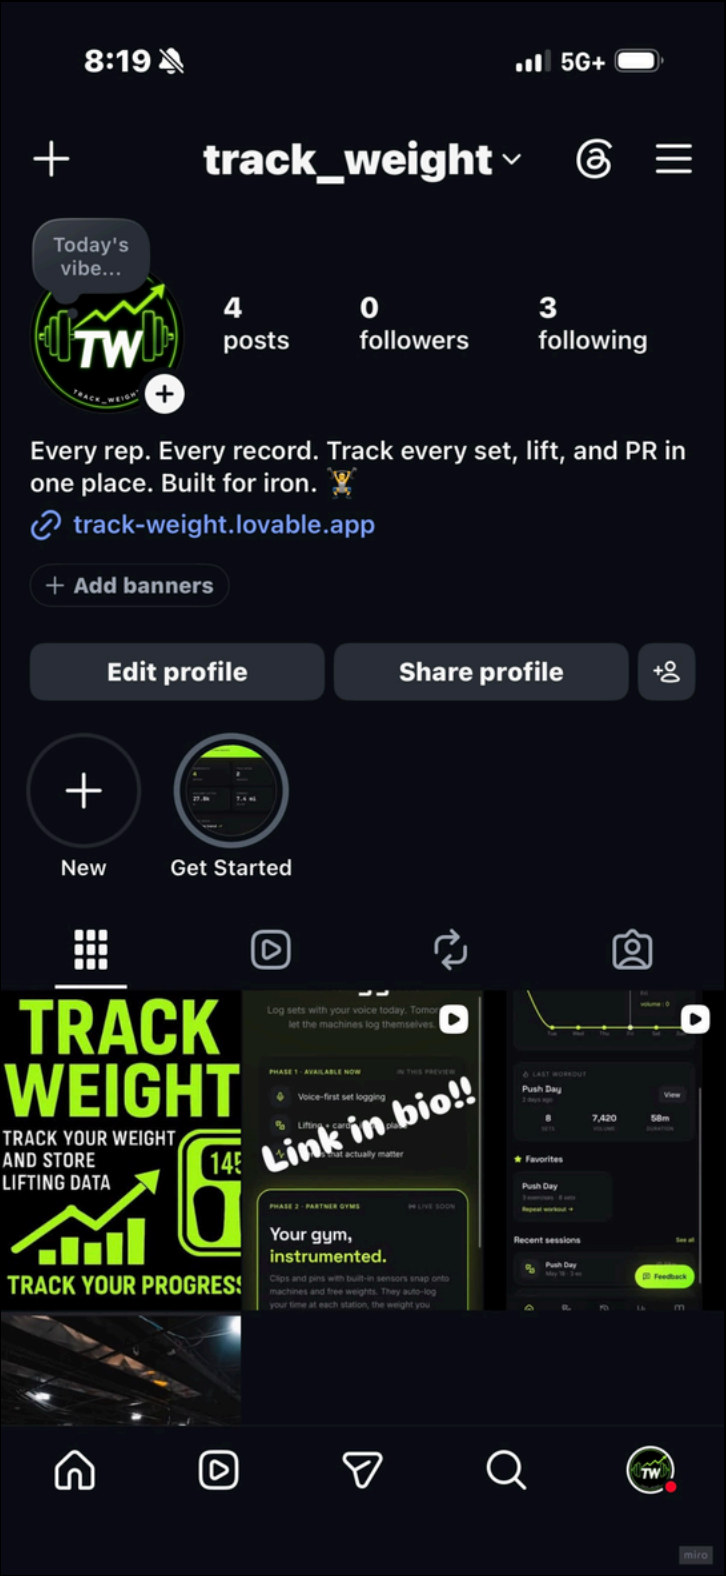

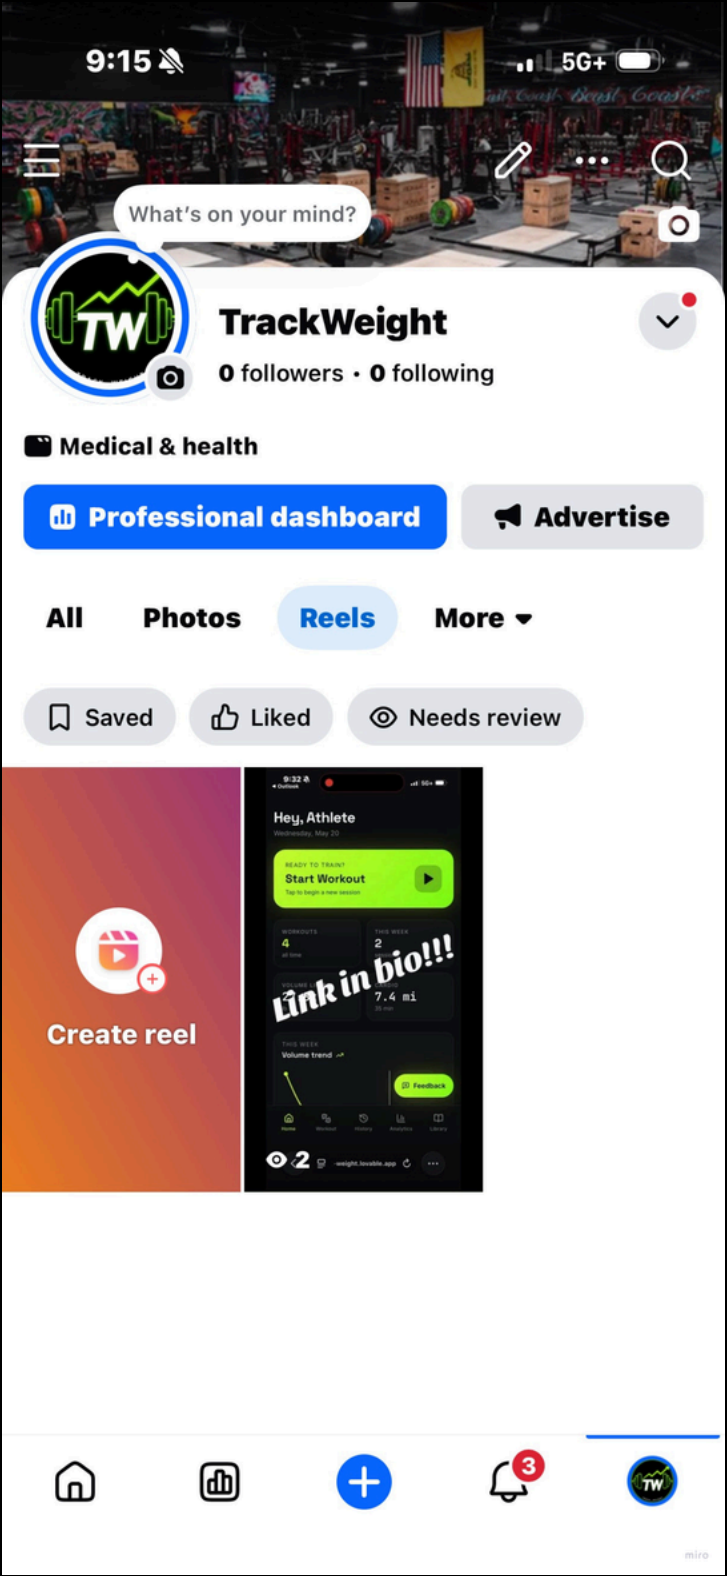

- Number of landing page visits
- Number of waitlist signups
- Signup conversion rate
- Number of survey responses
- Percentage of users who say they currently track inconsistently
- Percentage of users who say they would prefer automatic or low effort tracking

9. Success Criteria 🏆

How do you qualify and/or quantify a successful outcome of this experiment?

- At least 50 landing page visits
- At least 15 survey responses or waitlist signups
- At least 40 percent of visitors complete the call to action
- At least 60 percent of survey respondents say they struggle with consistent workout tracking
- At least 60 percent show interest in automatic or low effort workout tracking
